

## Project Design Phase-II Technology Stack (Architecture & Stack)

Date	10 October 2022
Team ID	PNT2022TMID37146
Project Name	Efficient Water Quality Analysis & Prediction using Machine Learning
Maximum Marks	4 Marks

### Technical Architecture:

The Deliverable shall include the architectural diagram as below and the information as per the table1 & table 2

**Table-1 : Components & Technologies:**

S.No	Component	Description	Technology
1.	User Interface	An Interface for the user to interact with the prediction model.	HTML, CSS, JavaScript
2.	User Registration	User can register in the web application	HTML forms

3.	Water Quality Prediction	The user enters the data which is given as input to model to predict the water quality.	Machine Learning with Python.
4.	Update Prediction result	The result of water quality prediction is updated in the Web UI for the user to know the output.	Python.
5.	Database	Relational database structure to store the user data	MYSQL.
6.	Cloud Database	Database services on IBM cloud.	IBM Cloudant.
7.	Machine Learning Model	To predict the water quality with various input parameters.	Random Forest, KNN, Decision tree, Logistic Regression.
8.	Infrastructure (Server / Cloud)	Application Deployment on Cloud	IBM Cloud.

**Table-2: Application Characteristics:**

S.No	Characteristics	Description	Technology
1.	Open-Source Frameworks	The python open-source frameworks are used to build the web application as well as to build Machine Learning model.	Python Flask, Numpy, Scikit-Learn etc.
2.	Scalable Architecture	The 3-tier architecture used with a separate user interface, application tier and data tier make it easily scalable.	IBM Watson Studio.
3.	Availability	The web application is highly available as it is deployed in cloud.	IBM Cloud.
4.	Performance	The performance of the website is improved with caching and security.	IBM Cloud Internet Services.
